Steamhaus

AWS-Funded AI Readiness Assessment

When AI potential is clear but the path forward isn't

With competing priorities, it's hard to know which AI use cases will deliver the most value.

Meanwhile, fragmented data, legacy infrastructure and governance gaps stand in the way of adoption.

And without a clear view of implementation costs, likely ROI and what it takes to reach production, the business case for AI investment is hard to build.

From AI potential to a practical plan

The AI Readiness Assessment gives you that path, **fully funded by AWS for eligible organisations and delivered by Steamhaus**, an AWS AI Competency Partner.

Over 2–4 weeks, our senior consultants will work with your business and technology leaders to identify where AI can deliver the greatest value, assess the readiness of your data and technology foundations, and develop a practical roadmap for adoption.

aws PARTNER AI Services Competency

1 Discover opportunities

Starting with your business goals and technology priorities, the assessment identifies where AI could have the greatest impact.

- Identify and prioritise potential AI opportunities
- Understand the business challenges AI could address
- Explore 3–5 high-value candidate use cases or technology priorities
- Identify the key dependencies and barriers to adoption

2 Assess your data & AI readiness

Your current data, technology and governance foundations are then assessed to establish where you are today and what needs to be in place to support your AI ambitions.

- Assess your data, AI and governance maturity
- Identify gaps in your current foundations
- Map current and target-state capabilities
- Produce a clear Data & AI Readiness Scorecard

AWS-Funded AI Readiness Assessment

3 Define the architecture & roadmap

The findings are translated into a practical AWS-based target architecture and implementation plan, giving your teams a clear view of what needs to happen next.

- Recommend an appropriate AWS architecture
- Identify build vs. buy considerations
- Sequence technical and organisational dependencies
- Define quick wins and longer-term initiatives
- Create a phased 0–3, 3–6 and 6–12 month roadmap

4 Quantify the value

A clear commercial case brings the strategy together, giving leadership the information needed to make informed investment decisions.

Estimate costs and benefits

Model business impact and payback from your own figures

Assess TCO and potential savings

Prioritise initiatives by value and effort

What will you receive?

At the end of the engagement, you'll get a report you can take straight to your leadership team, covering:

- **Opportunity & Current-State Summary**
- **Data & AI Readiness Scorecard**
- **AWS Architecture Recommendation**
- **ROI & Business Case**
- **12-Month AI Roadmap**

Your next step towards AI readiness.

Tailored to your priorities, the assessment helps you identify the right AI opportunities, overcome barriers to adoption and build a roadmap for measurable business value.
